# BEFORE YOU START:

You will need to know the following information to correctly determine the bottom bracket for your needs.

### BB Shell Type

### >> BSA Threaded

# >> Press Fit Ø46mm

## >> Press Fit Ø42mm

>> T47 Threaded

### **BB** Width

Measure the dimension over the full width of the frame at the BB. Frame sizes can vary a little but should be ±1mm from one of the

sizes detailed in the table inside.

# Crankset Axle

You will need to know the axle diameter, the main sizes are:

24mm | 29mm | 30mm

You should also check you have the required axle length on your crankset to suit the installed over bearing width of the bottom bracket once installed on your frame. Crank axle types usually fall into the following groups:

Road: To suit 91mm over bearing width, MTB: To suit 96.5mm over bearing width. MTB DH: To suit 111.5mm over bearing width. FATBIKE 100: To suit 128.5mm. FATBIKE 120: To suit 148.5mm.
